

Angry Miao AFA R2 Review

Design - Unique packaging, attention-grabbing exterior design: My first impression upon receiving this keyboard was its packaging, which was absolutely stunning. The suitcase-style packaging design exudes a strong metallic feel, instantly conveying a sense of high-tech sophistication. This direct and eye-catching design not only highlights the product's technological aspect but also captivates the viewer at first glance. The keyboard's own exterior design is what truly impressed me. Its futuristic design feels like something out of a sci-fi setting, and I found myself truly enamored by it. The warm red and white color scheme, combined with the red accents, looks

extremely comfortable, especially the newly upgraded glass control panel that subtly reveals internal electronic components; this is definitely one of my favorite details. The overall frame design is also very striking, resembling the form of a fighter jet, transforming it from just a keyboard into a work of art.

Typing experience - Exceptional tactile feel and diverse user experience: The tactile feel of the keyboard is what I appreciated the most while using it. The adjustable switch design that allows customization is truly astonishing. With 18 different keyboard configurations, using the keyboard becomes a delightful experience. Each keystroke brings a distinct tactile sensation, and this high level of customization provides me with a unique keyboard experience every time.

Ergonomic - Outstanding ergonomic design and user experience: Adapting to this keyboard might take some time, especially because I opted for keycaps without labels for aesthetics, which increased my learning curve. However, once I got used to the spacious layout, I noticed how it completely relieves shoulder strain, which is a significant advantage. In extended periods of intensive keyboard usage, the ergonomic design undeniably provides robust support. For me, it's not just a keyboard; it's like a piece of art. During moments of fatigue, admiring the keyboard's details and design becomes my ultimate relaxation method. While the wrist rest feels innovative, integrating it seamlessly with the keyboard would be even better, providing superior wrist support during movement.

Improvement - Personal suggestions and ideas: In my view, this keyboard is already close to perfection. Nonetheless, I have a few personal ideas that might inspire its future improvements. Firstly, enhancing central control functions, such as adjustable lighting or a dedicated screen, would further enrich the user's interactive experience. Secondly, incorporating more backlighting at the bottom of the keyboard to accentuate its overall architecture and give it a more tactile feel akin to a fighter jet would be a great enhancement.

Conclusion: Overall, the AFA R2 is an exceptional Alice-layout keyboard that excels in both comprehensive assessment and real-world experience. Whether for a novice like me or an experienced player, there are satisfying aspects to be found in its usage. Of course, its premium price tag necessitates careful consideration. Nevertheless, I believe that this keyboard is close to perfection and has become the unequivocal choice in my keyboard selection.

Overall score: 9/10

Last thing: For programming, I highly recommend Angry Miao 65 less, the touch panel is super comfortable for coding. If you like to use Apple magic trackpad, they got pretty same feeling. And for AFA is more like a professional customization keyboard. But ergonomic design is another important thing. Really hard to decide which one is better.
